

Group 7:

HOMESTAY XYZ BOOKING SYSTEM

CHOH JING YI

JOANNE CHING YIN XUAN

MUHAMMAD AFIQ DANISH BIN MOHD HAZNI

TAN SHEAU JUN

MEMBER ROLES AND CONTRIBUTION

Choh Jing Yi

Mini Project Coordinator

- Task Distribution
- Outline objective of case study
- Develop Code
- Complete Meeting Log

Joanne Ching Yin Xuan

System Designer

- Finalize System requirement, analysis and design
- Design the system
- Develop Code
- Finalize all code

Muhammad Afiq Danish bin Mohd Hazni

System Analyst

- Documentation of requirements and analysis
- Develop UML class and use case diagram of Homestay XYZ Booking System
- Develop Code

Tan Sheau Jun

Quality Assurance

- Documentation of problem statement and complete synopsis and objective
- Complete and add description of the output for customers.
- Develop Code
- Finalize all documentation

UNDERSTANDING OF PROJECT

1

During the process of completing this project, I learned:

- How to apply the FIFO principle to create bookings, cancel bookings, and handle room availability
- The importance of team roles and responsibilities by assigning specific roles to each member which helped in managing tasks efficiently
- Communication and collaboration in streamlining the development process

2

During the process of completing this project, I learned:

- How to use queue concept (FIFO) to manage bookings fairly, prevent overbooking, and streamline the process for customers. Later requests for the same date are processed only after previous customer checking out
- The importance of communication in designing a system to solves the problems effectively.

3

During the process of completing this project, I learned:

- To implement a queue data structure in real-life scenarios such as a homestay booking system
- To analyze the system requirements and develop a UseCase and class diagram for our system
- The importance of cooperating with my team members

4

During the process of completing this project, I learned:

- How to implement a queue using arrays, including operations like enqueue (adding to the queue), dequeue (removing from the queue), and peek (viewing the front element).
- Utilized a queue to maintain a booking system in FIFO (First In, First Out) order
- Cooperation and communication between team members is vital in order to complete project
