Project Task 6B

Network Design for Faculty of Computing Block N28B

---Router Ranger (Group 8)

URL of video reflection: <https://youtu.be/PN-2RrfaRTs>

My contribution to the project:

As a group leader, I discussed the requirements for every task with my group members and started Google Meet discussions to make sure everyone understood the objectives. I made sure that everyone was thoroughly understood the project guidelines and assessment rubric throughout these meetings. I distributed tasks equally among the members and setting clear due dates to maintain progress. I continuously promoted efficient communication and teamwork by conducting meetings and progress reports to assist the team. Lastly, I took responsibility for examining every deliverable to ensure the project was completed on time and met the established goals and standards.

Contributions of Other Group Members:

Neo Li Xin - He is a valuable contributor to the project, consistently tracking the progress of tasks. He completes the assigned work on time, follows the rubric, and ensures the work is thorough and well-organised. Neo worked on IP addressing, designed the video conference room, chose network equipment, and helped with report indexing and final design confirmation.

Pravinraj a/l Sivabathi - Pravinraj consistently provides valuable suggestions for each task. He actively seeks clarification on his responsibilities and frequently consults the leader to ensure the quality of his work aligns with project standards. Pravinraj's attention to detail and commitment to the project are evident in his work, particularly in designing the Embedded Lab and identifying essential components for each room.

Ahmad Ziyaad bin Mohd Abbas - Ahmad Ziyaad often failed to respond to messages and showed minimal effort in contributing to the project. His lack of participation created challenges for the team, forcing other group members to take on his responsibilities to ensure the tasks were completed on time.

How you work as a group

Our group maintained effective communication and collaboration through regular meetings on Google Meet. We ensured that each member's work was valued and incorporated into the project. Everybody was able to contribute equally because tasks were assigned according to individual strengths. Frequent progress checks ensured that we stayed on track and addressed any issues together.

What you have learned from working as a group

I learned the value of strong leadership and communication from working in a team. I gained experience managing deadlines, managing conflicts to reach a solution, and organizing work among different group members. The project made clear how important teamwork is to successfully achieve project objectives.

What you have learned from doing the project

From working on this project, I gained a wealth of knowledge and experience through my active involvement in each task. I learnt how to use Visual Paradigm to generate a comprehensive floor plan in Task 1. In Task 2, I understood the importance of thorough planning and stakeholder engagement to ensure the project's practicality and alignment with faculty computing goals. In Task 3, I gained a deeper understanding of networking hardware, including switches, routers, and wireless access points, and discovered how to evaluate their features for specific use cases. Task 4 taught me how to effectively arrange cabling and device placements and gave me knowledge about building scalable and dependable network infrastructures. In Task 5, I learned how to allocate IP addresses effectively to support multiple work areas while avoiding conflicts.

Throughout the project, I improved my comprehensive understanding of network communication principles and how they are applied in real-life situations, preparing me for future challenges on similar ones.

My comments and suggestions on the project

I learned a lot from the project, especially about network design and floor planning that allowed me to apply my theoretical knowledge to real-world situations. However, there is potential for development to improve the overall effectiveness and experience. For example, allocating more time for revisions and stakeholder feedback could improve the quality of deliverables. Additionally, task allocation and tracking would be streamlined by implementing structured collaboration tools like project management software or task boards. This strategy also ensures team members' responsibility with transparent progress reports facilitating an efficient distribution of contributions.
